

PEDRO LOURES · GAME DESIGNER · TORONTO

Pedro Loures

I design play you can feel.

Game designer and Unity developer since 2012. My work spans my college capstone Loneliness, which won Best Short Paper and 3rd in the Popular Vote at SBGames 2013, a persuasion-driven training sim for Fiat, seated VR minigames, and most recently full-body haptic VR at UT Austin's Texas Immersive Institute. I prototype every idea myself, so it gets tested in play, not just on paper.

Systems & mechanics

SELECTED PROJECTS

HAPTIC VR · UNITY · 2026

Anchored Memories

Five-act haptic VR story on climate migration · Unity lead and project engineer · UT Austin, 2026

Role Unity Lead · Project Engineer (D2R Studios, volunteer) · **Year** 2026 · **Engine** Unity · **Team** 12+ (TXI, D2R Studios, UT Austin advisors) · **For** Texas Immersive Institute, UT Austin

- Designed how the five acts are built: each is a moment in a girl's life with her dad and their Texas home, with weather that mirrors hurricane categories 1 to 5 as the sea rises over the years
- Researched how to mimic each storm level, then gave every act inspector controls for the sea and other elements, so the team could shape the weather without code
- Set the project up so students with no game-development experience could step in and fill in the blanks

LEADERSHIP

- Moved the project from Unreal to Unity when I joined, so a small, part-time team could reach a working build for the July 2026 showcase
- Main developer on the levels for more than half of the project, and on call as backup for the whole year
- Set up and maintained the GitHub project board, supported the Scrum Master with planning and task breakdown, and onboarded the students into the project

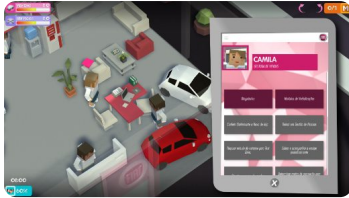

PUZZLE PLATFORMER · SBGAMES AWARD · 2013

Loneliness

Shadow-puzzle platformer · SBGames 2013: 3rd in Popular Vote + Best Short Paper

Role Game Designer · Level Designer · Programmer · **Year** 2013 · **For** PUC capstone

- Shadows replay your earlier moves, and the dark is the only thing that can hurt you: a personal theme expressed through mechanics, inspired by The Company of Myself
- Darkness as the only threat: when pushed to add enemies, I kept the design and committed to 18 stages instead of 3 in exchange
- 3rd place in SBGames 2013's Popular Vote with only three tutorial levels, plus Best Short Paper in the Art & Design track

TRAINING SIM · CLIENT: FIAT

Fiat Quality Manager Training

Data-driven training simulation for Fiat dealership Quality Managers

Role Dev Lead · Programmer · Game Design team · **Engine** Unity · **For** Fiat · D2R Studios

- Turned the around 25 reports a Quality Manager reads into two headline indicators, with the full detail one click away
- Influence mechanic: a Quality Manager can't give orders, only persuade, so good dialogue choices earn influence that makes people act faster
- Daily difficulty follows a customizable Fibonacci curve across a 7-day cycle, so by day 7 the player can face up to 13 difficulty-1 issues or fewer, harder ones (rated up to 4)

LEADERSHIP

- Dev lead and one of the main programmers, while also designing the game as part of a team where everyone helped shape it

VR · 4 MINIGAMES · SOLE PROGRAMMER

VR Carnival

Four seated VR minigames in under a month · sole programmer

Role Sole Programmer, Game Design · **Engine** Unity · SteamVR · **Team** 3 · **For** Centennial College VR course

- Designed for small rooms: every minigame is played seated, but each one is physical in a different way
- Pitched and designed Whack-a-Mole 360 and Simon Says; built all four games
- Exposed every gameplay value so we could tune difficulty and balance through playtesting

LEADERSHIP

- On a short-handed team, took on all the programming and scoped the project to four core games in under a month, polishing only after all four were built

MULTI-SCREEN APP · CLIENT: VALE · STILL IN USE

Vale · Porto de Tubarão

Three-screen presentation system controlled from a tablet · 2012 → 2019

Role Desktop developer (2012) · Rebuild developer (2019) · **Year** 2012 / 2015 / 2019 · **Engine** Unity · **For** Vale · Zor Design · D2R Studios

- Presentation experience for a corporate visitor room: images, videos and data flow across three borderless screens, driven by a presenter from a tablet
- Content updates need no developer: drop correctly named images in and rebuild
- Still in use today, more than a decade after the first version

MANAGEMENT SIM · UNITY · 2021

Dream Arcade Simulator

Arcade management sim · Centennial College capstone, team of 5

Role Gameplay Programmer · **Year** 2021 · **Engine** Unity · **Team** 5 · **For** Centennial College capstone

- Turn-based day/night loop: plan and build your arcade at night with time stopped, then watch robot customers play it out during the day
- Customers with game preferences, patience and a temper: wait too long and they leave, sometimes breaking machines you'll pay to repair
- Win on money and fame, with a The Sims-inspired cheat code system as an escape hatch

ANIMATION TOOL · PYTHON · STILL IN USE

Blender Expressions Add-on

Python add-on that speeds up facial-expression keyframing · built for D2R Studios' animator, 2019

Role Tool designer · Programmer · **Year** 2019 · **Engine** Blender · Python · **For** D2R Studios

- Designed around one animator's workflow: every facial expression for a character in one panel, picked with a click instead of digging through textures

EDUCATIONAL · LUA · UNITY

Mitologia da Programação

Educational game where players solve Greek-myth challenges by writing Lua

Role Game Designer · Level Designer · Programmer · **Engine** Unity · embedded Lua · **Team** 2

- Wrote every level around a Greek myth: each part opens with a tale, then challenges the player to make it happen in code
- Built the concept around the CS student I was helping: she loved Greek mythology, so every level retells a myth, to keep her motivated to finish

HORROR · GAME JAM · TEAM LEAD

Coma · College Game Jam

Horror game jam on the theme "Another World" · led a team of newer developers

Role Team Lead · Programmer · **Year** 2021 · **Engine** Unity · **For** College midterm game jam

- 2D sprites that always face the player inside a 3D maze: an unsettling look the team could actually produce on a jam timeline
- Trap and scare toolkit (flickering flashlight, inverted controls, slow/speed zones, jump scares) that level designers combine freely

LEADERSHIP

- Led a team of newer students (placed there by the coordinator to lead) and set up a prefab workflow so the artists could do the level design themselves

MORE WORK

Animal Defense, Fiat Personalização, Custom Defense, Procedural Dungeon Generator, Chaveirinho, Digital Wonderland, Recifuturo. Details, videos and code at pedroloures.com/projects.
