

PEDRO LOURES • GAME DESIGNER

Pedro Loures

I design play you can feel.

Game designer and Unity developer since 2012. My work spans a personal indie game recognized at SBGames 2013, a persuasion-driven training sim for Fiat, seated VR minigames, and most recently full-body haptic VR at UT Austin's Texas Immersive Institute. I prototype every idea myself, so it gets tested in play, not just on paper.

Systems & mechanics

Unity • C#

Level design

Narrative

Prototyping

VR / Haptics

SELECTED PROJECTS

HAPTIC VR • TEXAS IMMERSIVE INSTITUTE • 2026

HAPTIC VR • UNITY • 2026

Anchored Memories

Haptic VR journey on climate migration • Unity lead • UT Austin, 2026

Role Unity Lead (D2Studios, volunteer) • **Year** 2026 • **Engine** Unity • **Team** 12+ (TXI, D2Studios, UT Austin advisors) • **For** Texas Immersive Institute, UT Austin

- Narrative VR in five acts, where spatial audio and full-body haptics turn memory and displacement into something the player physically feels
- Built for showcase audiences, with a research layer that pairs the experience with biometric feedback

LEADERSHIP

- Moved the project to Unity: the team had started planning in Unreal, and switched to my main engine when I joined so we could reach a working deliverable for the July 2026 showcase

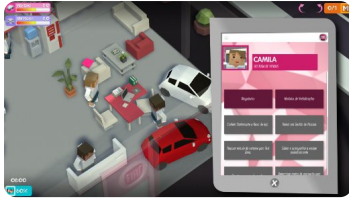

PUZZLE PLATFORMER • SBGAMES AWARD • 2013

Loneliness

Shadow-puzzle platformer • SBGames 2013: 3rd in Popular Vote + Best Short Paper

Year 2013 • **For** PUC capstone

- A personal theme expressed through mechanics, inspired by The Company of Myself, with shadows that replay your earlier moves
- Darkness as the only threat: I kept the design free of conventional enemies and defended that choice through development
- 3rd place in SBGames 2013's Popular Vote with only three tutorial levels, plus Best Short Paper in the Art & Design track

TRAINING SIM • CLIENT: FIAT

Fiat Quality Manager Training

Data-driven training simulation for Fiat dealership Quality Managers

Engine Unity • For Fiat • D2R Studios

- Turned the 25 or so reports a Quality Manager reads into two headline indicators, with the full detail one click away
- Influence mechanic: a Quality Manager can't give orders, only persuade, so good dialogue choices earn influence that makes people act faster
- Difficulty scales over each 7-day cycle along a Fibonacci curve (customizable), mixing issues rated 1 to 4

VR • 4 MINIGAMES • SOLE PROGRAMMER

VR Carnival

Four seated VR minigames in under a month • sole programmer

Role Sole Programmer, Game Design • Engine Unity • SteamVR • Team 3 • For Centennial College VR course

- Designed for small rooms: every minigame is played seated, but each one is physical in a different way
- Pitched and designed Whack-a-Mole 360 and Simon Says; built all four games
- Exposed every gameplay value so we could tune difficulty and balance through playtesting

LEADERSHIP

- Scoped a short-handed team to four core games in under a month, then iterated on polish

MULTI-SCREEN APP • CLIENT: VALE • STILL IN USE

Vale • Porto de Tubarão

Three-screen presentation system controlled from a tablet • 2012 → 2019

Role Desktop developer (2012) • Rebuild developer (2019) • Year 2012 / 2015 / 2019 • Engine Unity • For Vale • Zor Design • D2R Studios

- Presentation experience for a corporate visitor room: images, videos and data flow across three borderless screens, driven by a presenter from a tablet
- Content updates need no developer: drop correctly named images in and rebuild
- Still in use today, more than a decade after the first version

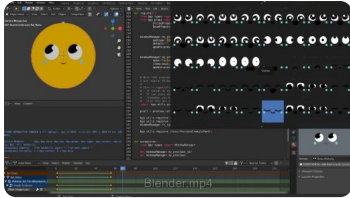

MANAGEMENT SIM • UNITY • 2021

Dream Arcade Simulator

Arcade management sim • Centennial College capstone, team of 5

Role Gameplay Programmer • Year 2021 • Engine Unity • Team 5 • For Centennial College capstone

- Turn-based day/night loop: plan and build your arcade at night with time stopped, then watch robot customers play it out during the day
- Customers with game preferences, patience and a temper: wait too long and they leave, sometimes breaking machines you'll pay to repair
- Win on money and fame, with a The Sims-inspired cheat code system as an escape hatch

ANIMATION TOOL · PYTHON · STILL IN USE

Blender Plugin

Python add-on that speeds up facial-expression keyframing for animators

Engine Blender · Python

- Tool design around the animators' workflow: every facial expression for a character in one panel, picked with a click instead of digging through textures
- Still part of the animation pipeline today

EDUCATIONAL · LUA · UNITY

Mitologia da Programação

Educational game where players solve Greek-myth challenges by writing Lua

Engine Unity · embedded Lua · **Team** 2

- Wrote every level around a Greek myth: each part opens with a tale, then challenges the player to make it happen in code
- Shaped the concept around the student's own interests (Greek mythology) so she'd stay motivated to finish it

HORROR · GAME JAM · TEAM LEAD

Coma · College Game Jam

Horror game jam on the theme "Another World" · led a team of newer developers

Role Team Lead · Programmer · **Year** 2021 · **Engine** Unity · **For** College midterm game jam

- Horror on a jam timeline: 2D sprites in a 3D maze that always face the player, for an unsettling look the team could actually produce
- Trap and scare toolkit (flickering flashlight, inverted controls, slow/speed zones, jump scares) that level designers combine freely

LEADERSHIP

- The coordinator placed me with newer students so I could lead; I set up a prefab workflow that let the artists do level design themselves

MORE WORK

Animal Defense, Fiat Personalização, Custom Defense, Procedural Dungeon Generator, Chaveirinho, Digital Wonderland, Recifuturo. Details, videos and code at pedroloures.com/projects.
